

Logbook review

Your logbook is more than just a record of your experience. The way flights are logged and how your book appears reveals quite a bit about a pilot. Sloppy pages with multiple colors or numerous corrections cause an interviewer to question your professionalism. In addition, a high number of pilots come to their interview with errors that are violations of the FAR's. As airline interviewers can attest, many applicants are not hired due to these problems. Most of the time, they were not even aware of these and could have fixed them prior had they known. We will look over your log books and help you identify any entries that will preclude you from being successful.
